DIGITAL PATIENT LIFT SCALE

Detecto's Patient Lift Scale is a completely self-contained instrument that determines the weight of a person suspended from a portable patient lift mechanism. The indicator incorporates a lock weight feature which stores the last weight reading when the unit is turned off and can be used where standard indicators are too large and cumbersome. It operates on only one (1) 9-volt Alkaline battery; battery-power is saved due to the automatic shut-off feature. The scale also has a membrane keypad with only three (3) keys: ON/ZERO, OFF and LB/KG. Its so easy to setup and operate, the procedure is quickly learned.

Specifications

Capacity:	PL400: 400 lb x 0.2 lb	Temperature Range:	50 to 104½F
	180 kg x 0.1 kg		(10 to 40½C)
